List of Tasks

- Setup browser extension: Setup environment (10 hours)
- Data gathering: The current title and body or document being created based on cursor focus. (20 hours)
- Query term generation - Use the data gathered to make a query to chatGPT for the search terms. (30 hours)
- Find relevant docs - Use search terms, either by leveraging the existing search from campuswire or by using TF-IDF. (20 hours)
- Create sidebar UI - Create ui and populate content from search results.
- Create settings page. (20 hours)

Current Progress

Which tasks have been completed?

- Setup browser extension - Setup environment (10 hours)
- Query term generation - Use the data gathered to make a query to chatGPT for the search terms. (30 hours)
- Create sidebar UI - Create ui and populate content from search results.
- Create settings page. (20 hours)

Which tasks are pending?

- Find relevant docs - Use search terms, either by leveraging the existing search from campuswire or by using TF-IDF. (20 hours)
- Data gathering - The current title and body or document being created based on cursor focus. (20 hours)

Are you facing any challenges?

- Challenge of parsing relevant data returned from a query
- Sending a bearer token as part of page load message
- Supporting multiple browser tabs of campus wire with the browser extension
- Preventing current post from being returned as a relevant post
- Enhancing ChatGPT prompt to also use category
